M.G. MAINTENANCE SERVICE

In order to maintain a car in its most efficient and economical running condition, regular and thorough servicing is essential. It is with the object of providing this service that the M.G. Maintenance Voucher Scheme has been devised. Not only does this Scheme cover regular lubrication, oil changes, etc., but regular mechanical maintenance is also included in accordance with the recommendations laid down by the Engineering Staff of The M.G. Car Company.

The M.G. Maintenance Service commences on a new car with a FREE SERVICE to be given at or about the first 500 miles. This service is normally provided by the Dealer who supplied the car but with the consent of that Dealer and his stamped authority on the Free Service Voucher, this service may be carried out by any other M.G. Distributor or Dealer to suit the convenience of the Owner.

Further Vouchers are contained within this book to cover lubrication and all maintenance necessary at 1,000-mile stages, up to and including 12,000 miles.

These Vouchers may be presented to any authorised M.G. Distributor or Dealer in the United Kingdom for the work specified to be carried out by trained and qualified personnel, at the special prices indicated thereon, plus the cost of oils and other materials used. Any additional work found necessary during the course of these service operations will be reported to the Owner and charged separately, if authorised by him.

Regular servicing, as proven by presentation of completed voucher counterfoils, could well enhance the value of your vehicle in the eyes of a prospective purchaser.

It is important to note that the Vouchers must be used in their correct sequence at intervals of 1,000 miles, as if one type of service is omitted accidentally or otherwise, the sequence of maintenance operations will be disturbed.

- ENGINE.** Top up carburetter piston dashpots.
Lubricate carburetter controls.
Top up radiator.
Check dynamo drive belt tension.
Lubricate water pump sparingly.
Check valve rocker clearances and adjust if necessary.
Clean and re-oil air cleaner elements.
Clean carburetter and fuel pump filters.
- IGNITION.** Check automatic ignition control, lubricating distributor drive shaft, and cam and advance mechanism.
Check and adjust if necessary distributor contact points.
Clean and adjust if necessary distributor contact points.
Clean and adjust sparking plugs.
- CLUTCH (STANDARD).** Check level of fluid in the hydraulic clutch and brake master cylinder.
- CLUTCH (MANUMATIC).** Check fluid level in supply tank.
Lubricate pivot point between throw-out lever and slave cylinder push-rod with oil.
Clean and lubricate interior of slave cylinder.
Check slave cylinder push-rod adjustment.
- BRAKES.** Check brakes and adjust if necessary.
Change road wheels round diagonally to regularise tyre wear.

- Make visual inspection of brake lines and pipes.
Check level of fluid in the hydraulic brake and clutch master cylinder.
- HYDRAULIC DAMPERS.** Examine all hydraulic dampers for leaks, and on M.G.A. only, check fluid level in front dampers.
- GENERAL.** Tighten rear road spring seat bolts.
- BODY.** Check and tighten, if necessary door hinges and striker plate securing screws.
Lubricate door hinges, bonnet lock and operating mechanism.
- ELECTRICAL.** Check battery cell specific gravity readings and top up to correct level.
Lubricate dynamo bearing.
Lubricate trafficators, Magnette only.
- LUBRICATION.** Change oil in engine, gearbox and rear axle.
Fit new oil filter element.
Lubricate all grease nipples (except steering rack and pinion).
Re-pack front hub caps with grease.
- WHEELS AND TYRES.** Check tyre pressures.
Check wheel alignment.
- TEST.** Road test car and report.

1. **ENGINE.** Remove carburetter suction chambers and pistons, clean, reassemble and top up.
Remove carburetter float chambers, empty sediment and refit.
Lubricate carburetter controls.
Check valve rocker clearances and adjust if necessary.
Clean and re-oil air cleaner elements.
Check dynamo drive belt tension.
Lubricate water pump sparingly.
Clean carburetter and fuel pump filters.
 2. **IGNITION.** Check automatic ignition control, lubricating distributor drive shaft and cam and advance mechanism.
Check and adjust if necessary distributor contact points.
Fit new sparking plugs.
 3. **CLUTCH (STANDARD).** Check level of fluid in the hydraulic clutch and brake master cylinder.
 4. **CLUTCH (MANUMATIC).** Check fluid level in supply tank.
Lubricate pivot point between throw-out lever and slave cylinder push-rod with oil.
Clean and lubricate interior of slave cylinder boot and push rod.
Check slave cylinder push rod adjustment.
 5. **STEERING.** Check steering and suspension moving parts for wear.
 6. **BRAKES.** Check brakes, adjust if necessary.
Change road wheels round diagonally to regularise tyre wear.
7. **HYDRAULIC DAMPERS.** Examine all hydraulic dampers for leaks and on M.G.A. only, top up if necessary.
 8. **RADIATOR.** Drain, flush out and refill radiator.
 9. **GENERAL.** Tighten rear road spring seat bolts.
 10. **BODY.** Check and tighten if necessary door hinges and striker plate securing screws.
Lubricate door hinges, bonnet lock and operating mechanism.
 11. **ELECTRICAL.** Check battery cell specific gravity readings and top up to correct level.
Lubricate trafficators, Magnette only.
Lubricate dynamo bearing.
 12. **LUBRICATION.** Drain engine and refill with fresh oil.
Change oil in gearbox and rear axle.
Fit new oil filter element.
Lubricate steering rack and pinion.
Lubricate all grease nipples.
Re-pack front hub caps with grease.
 13. **WHEELS AND TYRES.** Check tyre pressures.
Check wheel alignment.
 14. **TEST.** Road test and report.

Make visual inspection of brake lines and pipes.
Check level of fluid in the hydraulic brake and clutch master cylinder.

It is recommended to owners that the following additional attention be given regularly :—
Check engine oil level. Top up radiator. Check tyre pressures.

Although the Scheme has been primarily devised for new cars, owners of cars already in service are strongly advised to take advantage of this improved method of car maintenance.

The Vouchers are equally applicable, subject to the following provisions :—

1. The Free Service Voucher is, of course, not applicable.
2. At 1,000 miles prior to the use of the first 'A' Service Voucher, the car should be given a general inspection, oils changed in engine, gearbox and rear axle, and a new oil filter element fitted. Thereafter, the sequence of maintenance operations is as specified on the Vouchers which should be used strictly at intervals of 1,000 miles.

When the last Voucher Service has been completed you are advised to obtain a new book of Vouchers from the M.G. Distributor or Dealer.
