HOOD SEALING

MGA
MGA 1600

When water is found to be entering the car over the front hood stick, the following method of sealing is recommended.

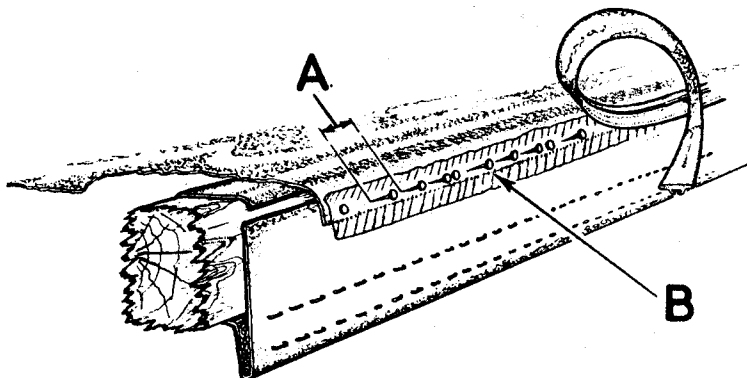

①

- Carefully remove the double-cord piping concealing the canopy tacks (Fig. 1)

- Increase the number of tacks securing the hood canopy to give a spacing of approximately $\frac{1}{2}$ " (12.5 mm.) as at 'A' (Fig. 2).

②

- Brush on a suitable adhesive over the canopy seam $\frac{1}{2}$ " (12.5 mm.) wide as at 'B'.
- Take a strip of P.V.C. leathercloth material, $\frac{1}{2}$ " (12.5 mm.) wide, the length of hood stick and firmly seal down with adhesive directly over tacks and seams as at 'B'.
- Replace double-cord piping.
